Bulk Inventory Tracking System (BITS) Optimize Your Inventory Logistics with Knowledge

Process Inventory Tracking System (PITS) Optimize Your Process Logistics with Inventory

The Inventory Tracking Systems are Web Based applications that provide companies with the ability to track bulk or liquid inventories. They support liquid inventory, point-of-sale, shipments, receipts, transfers for production and blending, as well as drumming operations. Furthermore, They can print and store BOL information, MSDS's, as well as tracking and reporting for Customers, Carriers, Venders, Production, and Sales.

They provide you the essential data required in order to optimise inventory for your bulk liquids, manage your supply chain, streamline your processing, shipping, and receiving processes, and provide reports for about all aspects of your inventory and processing operations.

Sherman & Associates, Inc. Can provide a full-range solution for Inventory Control, including precise online measurement, on-line data acquisition, remote inventory monitoring, and the seamless integration of current inventory data into planning, laboratory, and control systems for real-time inventory management.

The software is designed to scale for management of small to medium sized process plants and terminals with multiple locations.

Benefits

- Optimize usage, replenishment, and stock levels
- Reduce Inventory Costs, Eliminate Paperwork, Improve Productivity
- Improve delivery and quantity performance

Features

Prints BOL	Stores Signed BOL	Prints MSDS
Schedules Receipts	Schedules Shipments	Manages Transfers
Tracks Bulk Inventory	Tracks Drumming Inventory	Tracks Consumables Inventory
Manages Customer Products	Manages DOT Products	Manages Residual Products
Supports Toll Processing	Supports Product Processing	Supports Batch Processing

Reporting

Customized Reporting Options:

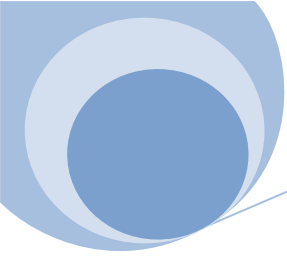

- Pre-Programmed Standard Reports
- User Based Report Generator (Standard & Advanced)

Conclusion

Consistency and accuracy in inventory information is the key to optimal planning, scheduling, sales, loss, and quality management. To achieve this, basic measurements, such as tank-levels, transfers, shipping, receiving, and blending have to be in place. The BITS application does this and more with the addition of shipping papers, MSDS, and extensive reporting capabilities. The Best Solution to Streamlining your Sales and Distribution Work Flows and reducing labor intensive paperwork.

Web based design utilizing Microsoft .NET technology. Designed for integration with SharePoint 3.0
Designed for Collaboration with Document Management, Workflows, Forms, Polls, Forums, and Web Parts.
